

# RATHATCH

## INSTALLATION GUIDE

Your **RATHATCH** can be installed anywhere in your ceiling, but choose an area where you can easily and regularly see the trap indicator. A roof access hatch, internal gargage or outside in your roof soffit are all ideal places to install **RATHATCH**. Check that the roof space is clear of timber, plumbing or electrical wires.

### STEP 1

Using the clear plastic retaining washer as your template, trace around the inside ring onto the space where you are installing **RATHATCH**.

### STEP 4

If you are installing into a soft roof like ceiling tile or plasterboard. Carefully cut out the hole using a sharp knife or keyhole saw then fold the retaining washer and insert it into the roof space as shown.

### STEP 2

Use a drill bit to drill a hole inside the traced circle. It needs to be large enough so you can insert a jigsaw blade into it. Alternatively use a drywall cut out tool as per our install video.

### STEP 5

Place the mounting ring into the hole ensuring the alignment lines are parallel to a wall. Using the fasteners supplied screw the mounting ring up into the ceiling. If using the plastic retaining washer, align the corresponding hole and screw fasten. Repeat on the opposite side then complete the rest of the screws.

### STEP 3

Insert a jig-saw into the hole and carefully cut out the circle to the traced line. Remove disk carefully.

### STEP 6

Bait and set the trap to the mouse or rat setting (see below), then insert into cavity and twist to lock it into position. If the roof is high, use the standard broom handel attachment to easily insert and twist into a locked position.

## DIFFERENT TRAP SETTINGS FOR RATS AND MICE

**RATHATCH** is designed to be more or less sensitive depending on what you are trapping. Below are the lever positions for each mode.

### RAT MODE

Pull the red lever down so it hits the plastic stop guide position.

### MOUSE MODE

Push the red lever up so it sits halfway between the two plastic stop guides and is horizontal.

### RELEASE

Push the red lever to the top stop guide position to unset trap. **Warning this will set the trap off - either control kill bar or keep fingers clear!**
