

# BAITING INSTRUCTIONS

## FOR YOUR **TIMMS CONVERSION**

1. For best results use an apple with good scent, when using small apples cut into 1/4s, for large apples use 1/8ths. Then cut the apple segment into three pieces as shown. Use the center piece on the trigger bar, one end piece at the base of the tree, the other end wedged under the front of trap.

2. Skewer the apple on the trigger pin, skin side first. This ensures the possum gets a good purchase with its large bottom incisor teeth.

**TIP** In areas with low possum numbers or high food availability use additional visual lure, such as an icing sugar and flour blaze. Apply this as shown beneath the trap.
